There is a vast array of opportunities to explore within Business Analytics.

You may choose to work in a variety of careers including Data Analytics, Pricing and Revenue Analytics, Risk Management, Marketing Strategy and Analytics or as a Business Operations Analyst. Therefore, it is strongly recommended that you conduct research as well as network with others to explore your career-related interests.

Business Analytics is a nice complement to any concentration; some of our more popular choices include Finance, Information Systems, Marketing or Strategy. Additionally, many students also seek minors outside of Questrom and interest can range based on the area most interested in. For all available minors, please visit the Boston University programs website found here.

DATA ANALYTICS

Data analysts make sense of the growing amount and range of data companies and organizations generate and collect. Making actionable answers out of data has become a key business skill. All kinds of organizations collect big data and want to use it to make or improve decisions. Firms in fields as varied as B2B and B2C commerce, health care, manufacturing, and marketing all use data analytics to improve processes and enhance profits. If you’re going to be a data analyst, you must know how to use statistical techniques accurately. You have to like and be good at working with numbers. You have to be able to see data like a mystery or puzzle. Jobs in data analytics focus not only on the numbers but also on how we communicate insight. Conveying the meaning of results in a way that can be quickly and easily grasped is essential.

Careers Include: Business Intelligence Analyst, Data Analyst, Data Scientist, Data Engineer, Quantitative Analyst, Data Analytics Consulting, Operations Analyst

FINANCIAL APPLICATIONS OF ANALYTICS

Financial analysts use financial data to spot trends and extrapolate into the future, helping their employers and clients make the best investing decisions. Businesses rely on financial analysts to determine when it is an auspicious time to buy or sell specific securities and, in some cases, companies use reports put together by financial analysts to determine if the entire business should be sold.

Data analysts perform a similar role, the primary distinction being that these professionals analyze data that may or may not relate to investing decisions. For example, a data analyst might study figures related to sales numbers, advertising efficacy, transportation costs, or wages versus productivity.

Ultimately, any piece of numerical data that could be used to make a business decision is potentially within the purview of a data analyst’s job. While they are not as laser-focused on the financial markets as their counterparts in the financial analyst world, data analysts are still expected to maintain up-to-date knowledge on investing practices. Often, accessing and organizing necessary data in this role requires high-level computer skills, making an information technology background, or at least a working knowledge of the field, a definite plus for an aspiring data analyst.

Careers Include: Risk Management, Financial Analyst and Data Analyst
MARKETING ANALYTICS
Analysts within marketing help determine a company’s position in the marketplace by researching their competitors and analyzing their prices, sales, and marketing methods. Using this information, they evaluate data using statistical techniques and software, and must interpret what the data mean for their client—they may also forecast future trends. Marketing Analysts can make charts, graphs, infographics, and other visual aids to present the results of their research. Their knowledge of the targeted consumer enables them to develop advertising brochures and commercials, sales plans, and product promotions. They study market conditions to examine potential sales of a product or service, help companies understand what products people want, who will buy them, and at what price.

Careers Include: Marketing Strategy & Analytics, Analytics Insights Manager, Market Research Analyst
